

You're Making All the Right Choices to Protect Your Child

Let's add one more to the list!

You're already doing so much to protect your kids! Vaccines are a simple and safe way to add one more layer of protection that lasts a lifetime. Stay strong, stay prepared, and **keep your family healthy.**

- ✓ Seatbelts
- ✓ Helmets
- ✓ Car Seats
- ✓ Handwashing
- ✓ First Aid Kits
- + Recommended Vaccines

Avoid Future Frustrations & the Real Cost of Getting Sick

When a child catches a preventable illness like COVID-19 or the flu, the whole family can feel it:

- Missed school, practice, and field trips
- Missed work, lost wages, and unexpected medical bills
- Paying for extra childcare
- Stress and missed time with friends

It's Time to Protect the Ones Who've Protected You

Grandmas, grandpas, nanas, poppas, abuelos, abuelas, and all older adults are at higher risk from illnesses like the flu and COVID-19 because our immune systems get weaker as we age.

If your family includes older adults, one of the best ways to care for them is by making sure **everyone in the home is vaccinated.** It's a simple step that protects the whole family!

Vaccines can help you avoid all this hassle! Keep your routine running smoothly by **making sure everyone in your household is up to date on their recommended vaccinations!**

Stay strong. Stay safe. Stay protected.

Talk to your doctor about getting up-to-date on vaccinations today!
