

Vaccines Are Safe, Proven, & Built on Trust

Vaccines Have a Long Track Record of Safety

Vaccines have been keeping people safe since the late 1800s. Because of widespread vaccination, deadly illnesses like smallpox and cholera are no longer everyday threats.

! Vaccines work, and we’ve seen it for over a century.

They’re Developed with Care & Science

The U.S. has had vaccine safety laws since 1902. Every vaccine goes through years of research, testing, and review before it ever reaches the public. Experts at the Center for Biologics Evaluation and Research (CBER) oversee this process every step of the way.

Once approved, vaccines are still monitored through systems like VAERS and regular inspections. That means you can feel confident in the safety and quality of every dose.

Trust the Providers Who Care for Your Family

Family doctors, pediatricians, and clinicians aren’t just healthcare experts, they’re advocates for your child’s health.

They recommend vaccines because they’ve seen the benefits, trust the research, and want your children to grow up strong, safe, and protected. And many are parents too, making the same choices for their own families.

! They welcome your questions and they’re here to help, not to pressure.

Vaccines Are:

- ✓ Time-tested and effective
- ✓ Continually monitored for safety
- ✓ Developed under strict safety standards
- ✓ Recommended by experts who care about your kids

You’re not alone in making these choices.

Your provider is here to support you.

Talk to your doctor today.

Protect your family for tomorrow.

Vaccines save lives. Let’s keep doing our part.
